See responsive menu solution for code at each step

Hamburger Menu

- **Step 1** - Add in hamburger menu to template(see image below for goal)

- position it absolutely so that it stays in the upper right hand side of the page

- **Step 2** - hide or show items based on media query of max-width: 768px

  hide nav on smaller screen, hide hamburger on large screen

- **Step 3** - Make a slight change to show main nav all the time. Add 100% width to each menu item so that it goes to the next line and each item also uses the entire lines.

- **Step 4** - Start with display none on the main nav when at the smaller width. And add js to react to the hamburger being clicked. Slide menu up or down based on whether it's viewable.
